

1.5 Disposal

- Soak the empty syringe or Catalyst V in water overnight. Dispose it appropriately according to the law about the waste.
- Dispose of empty container or package **except Catalyst V** according to the law about the waste.

As in any dental treatment, the patient's individual constitution and the unique requirements of clinical case at hand must be considered before selecting materials and conditions for use.

5. How to use Super-Bond C&B

5.1 Surface preparation

Essential that all surfaces to be bonded with Super-Bond C&B should be properly prepared. Preparation varies depending on the nature of the materials.

a-1. Tooth surface

Remove contaminants and stains using a polishing bur or oil-free, fluoride-free pumice to expose fresh tooth surface. Rinse thoroughly and dry isolation by rubber dam or cotton roll is recommended.

a-2. Surface treatment

Apply the appropriate Activator using a sponge plunger or dabber. After applying, rinse thoroughly with water and dry.

[Application time]	Red Activator	Green Activator
Enamel	30 sec	30-60 sec
Dentin	—	5-10 sec

*Do not use Red Activator on dentin. Alternatively, enamel may be prepared with Green Activator for 30–60 seconds.

b. Metal surface

Rinse metal surface thoroughly and dry. Air-abrade the metal surface with 50-micron aluminum oxide. If the surface is precious metal, apply a metal primer such as V-PRIMER on the metal surface to be bonded in order to increase bond strength and durability. V-PRIMER is sold separately by Sun Medical Co., Ltd. For application details refer to the instructions for the metal primer.

*Applying the Red Activator helps remove surface contaminants.

c. Ceramic/zirconia and resin material surface

Depending on the case at hand, clean the ceramic/zirconia surface with abrasive wheels and points or a prophyl cup with fluoride-free, oil-free pumice. Rinse thoroughly with water and dry. An ultrasonic cleaner is also effective. Then, apply a porcelain primer such as Super-Bond Universal Ceramic Primer on the ceramic/zirconia and resin material surface to be bonded in order to increase bond strength and durability. Super-Bond Universal Ceramic Primer is sold separately by Sun Medical Co., Ltd. For application details refer to the instructions for the porcelain primer.

*Applying the Red Activator helps remove surface contaminants.

5.2 Brush-dip technique

Applicable case: Direct traction of mobile teeth, Bonding orthodontic brackets, Direct bonded bridge, Repair of fractured orthodontic etc. *For various surface preparations, please refer to "5.1 Surface preparation" above.

5.3 Dispensing the Polymer

Dispense an appropriate amount of Polymer into the well "P" of the Dispensing Dish. Flatten Polymer in the well "P" by tapping the Dispensing Dish.

5.4 Preparation of the Activated Liquid

Hold the Monomer or Quick Monomer bottle vertical and dispense the appropriate number of drops into well "L" of the Dispensing Dish. Hold the Catalyst V syringe vertical, and turn the screw to dispense the proper number of drops into the Monomer or Quick Monomer. Stir lightly with a Brush Tip. This mixture is called "Activated Liquid". *The Activated Liquid gradually deactivates. Use it within 5 minutes after preparation.

[Activated Liquid]

Monomer (Quick Monomer)	Catalyst V	Operation time
4 drops	1 drop	5 minutes after mixing
8 drops	2 drops	

5.5 Brush-dip procedure

Dip the Brush Tip into the Activated Liquid. Touch the brush to the Polymer in the well "P". A small ball of polymer will be picked up on the wet tip of the brush. Brush the Polymer ball onto the surface being prepared. As soon as the brush touches the surface, the Polymer will spread out to create a creamy, homogeneous layer. If necessary, repeat the procedure until the entire surface is covered with the cement.

*When you repeated the procedure, clean up the brush with gauze before you dip it.

*By applying the Activated Liquid to the adhesive surfaces in advance, the familiarity of Super-Bond C&B and the adhesive surface is improved.

[Curing time in Brush-dip technique]

Polymer type	Monomer (Quick Monomer)	Catalyst V	Curing time (37°C)
Clear	—	—	Monomer: 5 min Quick Monomer: 3.5 min
Ethestic	—	—	Monomer: 5.5 min Quick Monomer: 4.5 min
Opaque Ivory	—	—	Monomer: 5.5 min Quick Monomer: 4 min
L-Type Clear	—	—	Monomer: 6 min Quick Monomer: 6 min
L-Type Radiopaque	—	—	—

5.6 Setting and finishing

Refer to the curing time at 37°C shown in the above table and perform finishing and polishing procedures after sufficient polymerization.

If complete setting is desirable, wait to polish until the next day.

5.3 Bulk-mix technique

Applicable case: Cementing of inlays, onlays, crowns, bridges, veneers and root post etc. *For surface preparation, please refer to "5.1 Surface preparation" above.

5.4 Preparation of the Activated Liquid

Dispense an appropriate amount of the Dispensing Dish it will be chilled when you use it. The recommended temperature range of the Dispensing Dish is 10–16°C. Hold the Monomer or Quick Monomer bottle vertical and dispense the appropriate number of drops into well "L" of the Dispensing Dish. Hold the Catalyst V syringe vertical, and turn the screw to dispense the proper number of drops into the Monomer or Quick Monomer. Stir lightly with a Brush Tip (for Bulk-mix). This mixture is called "Activated Liquid".

*Do not use the Activated Liquid when you remove it from the refrigerator, dry the well using an air syringe.

[Activated Liquid]

Monomer (Quick Monomer)	Catalyst V	Operation time
4 drops	1 drop	5 minutes after mixing
8 drops	2 drops	

5.5 Setting and finishing

Refer to the curing time at 37°C shown in the above table and perform finishing and polishing procedures after sufficient polymerization.

If complete setting is desirable, wait to polish until the next day.

5.6 Setting and finishing

Refer to the curing time at 37°C shown in the above table and perform finishing and polishing procedures after sufficient polymerization.

If complete setting is desirable, wait to polish until the next day.

5.7 Setting and finishing

Refer to the curing time at 37°C shown in the above table and perform finishing and polishing procedures after sufficient polymerization.

If complete setting is desirable, wait to polish until the next day.

5.8 Setting and finishing

Refer to the curing time at 37°C shown in the above table and perform finishing and polishing procedures after sufficient polymerization.

If complete setting is desirable, wait to polish until the next day.

5.9 Setting and finishing

Refer to the curing time at 37°C shown in the above table and perform finishing and polishing procedures after sufficient polymerization.

If complete setting is desirable, wait to polish until the next day.

5.10 Setting and finishing

Refer to the curing time at 37°C shown in the above table and perform finishing and polishing procedures after sufficient polymerization.

If complete setting is desirable, wait to polish until the next day.

5.11 Setting and finishing

Refer to the curing time at 37°C shown in the above table and perform finishing and polishing procedures after sufficient polymerization.

If complete setting is desirable, wait to polish until the next day.

5.12 Setting and finishing

Refer to the curing time at 37°C shown in the above table and perform finishing and polishing procedures after sufficient polymerization.

If complete setting is desirable, wait to polish until the next day.

5.13 Setting and finishing

Refer to the curing time at 37°C shown in the above table and perform finishing and polishing procedures after sufficient polymerization.

If complete setting is desirable, wait to polish until the next day.

5.14 Setting and finishing

Refer to the curing time at 37°C shown in the above table and perform finishing and polishing procedures after sufficient polymerization.

If complete setting is desirable, wait to polish until the next day.

5.15 Setting and finishing

Refer to the curing time at 37°C shown in the above table and perform finishing and polishing procedures after sufficient polymerization.

If complete setting is desirable, wait to polish until the next day.

5.16 Setting and finishing

Refer to the curing time at 37°C shown in the above table and perform finishing and polishing procedures after sufficient polymerization.

If complete setting is desirable, wait to polish until the next day.

5.17 Setting and finishing

Refer to the curing time at 37°C shown in the above table and perform finishing and polishing procedures after sufficient polymerization.

If complete setting is desirable, wait to polish until the next day.

5.18 Setting and finishing

Refer to the curing time at 37°C shown in the above table and perform finishing and polishing procedures after sufficient polymerization.

If complete setting is desirable, wait to polish until the next day.

5.19 Setting and finishing

Refer to the curing time at 37°C shown in the above table and perform finishing and polishing procedures after sufficient polymerization.

If complete setting is desirable, wait to polish until the next day.

5.20 Setting and finishing

Refer to the curing time at 37°C shown in the above table and perform finishing and polishing procedures after sufficient polymerization.

If complete setting is desirable, wait to polish until the next day.

5.21 Setting and finishing

Refer to the curing time at 37°C shown in the above table and perform finishing and polishing procedures after sufficient polymerization.

If complete setting is desirable, wait to polish until the next day.

5.22 Setting and finishing

Refer to the curing time at 37°C shown in the above table and perform finishing and polishing procedures after sufficient polymerization.

If complete setting is desirable, wait to polish until the next day.

5.23 Setting and finishing

Refer to the curing time at 37°C shown in the above table and perform finishing and polishing procedures after sufficient polymerization.

If complete setting is desirable, wait to polish until the next day.

5.24 Setting and finishing

Refer to the curing time at 37°C shown in the above table and perform finishing and polishing procedures after sufficient polymerization.

If complete setting is desirable, wait to polish until the next day.

5.25 Setting and finishing

Refer to the curing time at 37°C shown in the above table and perform finishing and polishing procedures after sufficient polymerization.

If complete setting is desirable, wait to polish until the next day.

5.26 Setting and finishing

Refer to the curing time at 37°C shown in the above table and perform finishing and polishing procedures after sufficient polymerization.

If complete setting is desirable, wait to polish until the next day.

5.27 Setting and finishing

Refer to the curing time at 37°C shown in the above table and perform finishing and polishing procedures after sufficient polymerization.

If complete setting is desirable, wait to polish until the next day.

Ciment Dentaire Adhésif à Base de Résine

Super-Bond C&B

A L'USAGE EXCLUSIF DU CHIRURGIEN DENTISTE

1. Présentation du produit

Super-Bond C&B est un ciment résine adhésif polymérisant à base de 4-META™, de MMA™, de TBB™ et de polyméthacrylate de méthyle (PMMA). Il est utilisé pour faire adhérer sur le tissu dentaire des prothèses dentaires, fabriquées avec la vaste gamme de matériaux dentaires précisés-céussus. Après un pré-traitement approprié de la surface, l'adhésif à l'émulsion dentaire (Red Activator) décrit ci-dessous, à la dentine (Green Activator, décrit ci-dessous), au métal (préfixeur: primair-Metall-Primer, V-PRIMER™, hergestelt von Sun Medical Co., Ltd.) et au métal non précisé (aucun pré-traitement requis), à la céramique/zirconia (primaire céramique, "Super-Bond Universal Ceramic Primer" fabriqué par Sun Medical Co., Ltd.) et aux composites dentaires ("Super-Bond Universal Ceramic Primer").

- *1.4-méthacryloyloxyéthyl trimellitate anhydride
- *2. Méthyl méthacrylate
- *3. Tri-n-butylborane

Indications:

- Super-Bond C&B peut être utilisé dans les situations suivantes:
 - a. Application orthodontique et des surfaces en résine
 - b. Fixation directe de dents mobiles et bridges à fixation directe (bridges "Maryland").
 - c. Cimentation de inlays, onlays, couronnes, bridges, facettes dentaires et tenons radiculaires.
 - d. Réparation de prothèses cassées.

2. Composition du produit

- Super-Bond C&B™

- ① Super-Bond C&B
- ② Super-Bond C&B Starter Kit

Termes	Quantité dans le coffret	①	②
Catalyst V	0,7 mL dans une seringue	—	○
Monomer	0,3 mL dans une seringue	—	○
Quick Monomer	10 mL dans un flacon	—	○
Clear	3 g dans un pot	—	○
Ethestic	3 g dans un pot	—	○
Opaque Ivory	3 g dans un pot	—	○
Opaque Pink	3 g dans un pot	—	○
L-Type Clear	3 g dans un pot	—	○
L-Type Radiopaque	3 g dans un pot	—	○
Red Activator	5 mL dans un flacon	○	○
Green Activator	5 mL dans un flacon	○	○
Dispensing Dish	1	○	○
Sponge (L-S)	1	○	○

Measuring Spoon: Standard 1, Small 1, Large 1. Brush: Straight 1, Handle Bent 1. Brush Tips (Blue) <for Bulk-mix> 10x2, White 10, White-S 10.

■ Documents annexés: Instructions / Carton illustré *1: Contactez votre revendeur SUN MEDICAL afin de vous procurer recharges ou accessoires Super-Bond C&B de manière individuelle.

3. Composition

Tri-n-butylborane partiellement oxydé, autres. Monomer: Monomères Méthacrylates, autres. Quick Monomer: Monomères Méthacrylates, autres. Polymer: Polyméthacrylate de méthyle, autres. Red Activator: Acide phosphorique, Eau, Eau, autres. Green Activator: Acide azotique, Chlorure de fer, Eau, autres.

4. Précautions

[1.1 Sécurité]

Ce produit contient des substances pouvant causer des réactions allergiques. Bien lire les éléments suivants.

①Contre-indication

Super-Bond C&B contient de la résine méthacrylate, et ne doit pas être utilisé sur ou par des personnes sensibles aux acrylates, aux méthacrylates et aux matériaux synthétiques. Le contact avec des résines non-cicatrisantes et des tissus humains sensibles (muqueuses, etc.) risque d'entraîner des irritations, des dermatites ou des réactions inflammatoires. Le cas échéant, interrompre toute utilisation, nettoyer la zone avec une grande quantité d'eau et prendre contact avec un médecin si nécessaire.

②Contacts à éviter

Éviter tout contact du Super-Bond C&B avec les tissus mous, la peau ou les yeux. En cas de contact, nettoyer immédiatement la peau ou la muqueuse avec de l'eau et rincer abondamment à l'eau. En cas de contact avec les yeux, rincer abondamment les yeux à l'eau courante puis consulter un médecin ophtalmologue. En cas de contact de l'adhésif polymérisé avec un tissu mou (muqueuses, genèves), il est conseillé de polir la surface (adhésif pour supprimer toute rugosité). La pose de la digue et re-commande en usage inhabituel, ainsi que le port de gants en caoutchouc ou en PVC.

③Eviter l'ingestion

Éviter une ingestion accidentelle en appliquant et rinçant le matériau. En cas d'ingestion, le patient doit rechercher une aide médicale.

④Inflammabilité

Le Monomer, Quick Monomer et le Catalyst V sont très volatiles et inflammables. Ne pas les inhaler à proximité d'une flamme.

⑤Eviter l'inhalation

Manipuler Super-Bond C&B dans une zone bien ventilée (où l'air est remplacé plusieurs fois chaque heure). En cas d'inhalation de vapeurs, sortir pour davantage d'air frais.

⑥Prendre garde à l'acidité

Les "Red Activator" et "Green Activator" sont acides, il faut éviter tout contact avec les tissus mous, la peau et les yeux ainsi que toute déglutition de ces produits par le patient lors de l'application et lors du rinçage.

⑦Applications

Utiliser Super-Bond C&B exclusivement pour les indications spécifiées dans le mode d'emploi.

*Si ne pas utiliser conjointement d'autres matériaux.

*Les Brush Tips et le Sponge sont à usage unique. Ne pas réutiliser, et éliminer après utilisation.

*Jeter après chaque patient afin d'éviter toute contamination croisée.

*Toute trace chimique, de résine ou de ciment doit être soigneusement éliminée à l'aide d'un nettoyeur minutieusement à dent et la pièce protègeante avant le collage. Après ce nettoyage, prendre soin d'éviter toute auto-contamination et sécher la surface de manière adéquate. La pose de la digue et re-commande en usage inhabituel, ainsi que le port de gants en caoutchouc ou en PVC.

*Application du Super-Bond C&B sur les surfaces à l'aide du Brush Tip. *Mélanger Super-Bond C&B au dernier moment avant le collage.

*Le temps de prise varie avec la température, le type de poudre et le rapport poudre/Monomer (Quick Monomer).

*Restez les excès de ciment. Ne pas essayer de les retirer tant que le produit fait des fils.
